Yesterday's boundaries
are today's starting points.

Introducing

the TrueBeam™ system for radiotherapy and the TrueBeam STx™ system for radiosurgery.

Break the boundaries of today's treatment technologies with a system designed to target and treat cancer with pinpoint accuracy. A radical solution that is faster, is more powerful and advances the opportunity for new treatment options. Designed on a sophisticated, synchronized architecture, you can now navigate the complexities of cancer care with confidence. Developed from the ground up to optimize both radiotherapy and radiosurgery, TrueBeam and TrueBeam STx are innovative, intelligent and intuitive.

Welcome to a radically different future for you and your patients.

Real innovation
makes a true difference.

The TrueBeam system is engineered with a sophisticated architecture so that advancing innovation and unlocking new treatments can become a reality. It is a system where imaging and delivery are exquisitely integrated, providing superior control for progressive treatment techniques. Now you can customize your radiotherapy treatment program to your clinical needs and make a difference with the game-changing capabilities of the TrueBeam system.

trueBEAM_{STx}

TrueBeam enables a new way to collaborate using Developer Mode. In a protected, non-clinical environment, oncology thought leaders interested in pioneering new treatment and imaging techniques can aspire to go beyond today's clinical norms.

Intelligence that inspires excellence.

The inspiring TrueBeam system is highly intelligent. It choreographs, in real time, an asynchronous network for treatments that require fast, flexible timing capabilities. It seamlessly integrates respiratory gating, imaging and treatment techniques. With dose rates that are 40–140% higher than current standards, you can treat more patients faster. With an abundance of robust tools, this radical system encourages new levels of clinical excellence.

It's simply intuitive.

Exceedingly advanced as it is, TrueBeam is fundamentally unique in its intuitive simplicity. Imaging and treatment processes have been automated and streamlined for improved performance. A superior workflow with features such as one-button image acquisition and full automation of beam delivery make treatments 50% faster. A simple and straightforward system operation allows therapists to make the patient the focal point of their attention.

A quantum leap in cancer care.

Medicine does not advance on its own. It takes visionary thinkers who take pride in pushing the boundaries. Now you have the tools to initiate a wider spectrum of advanced treatment options that represent a quantum leap in bringing tomorrow's treatments to today's patients.
